

A short introduction. Then the product.

About 1:20 of slides + 3:40 of live demo. Allow up to 1 extra minute for pauses.

01 TENGEFLOW

10 sec

Hello, I'm Artyom Pinigin from BDA-2602. This is TengeFlow, a personal expense tracker designed for everyday spending in Kazakhstan.

02 THE PROBLEM

20 sec

Small purchases are easy to forget. For students managing a limited monthly budget, that makes it difficult to understand where their money goes. They need a clear, quick way to record daily spending.

03 KEY FEATURES

25 sec

Users create an account and set their monthly budget. They can record cash or card expenses, search and edit transactions, set category limits and review spending charts. These features connect each purchase to a clear view of the remaining budget throughout the month.

04 STACK AND RESPONSIVE DESIGN

25 sec

The frontend uses React and TypeScript with Create React App, Tailwind CSS and Zustand. The backend uses Flask, SQLAlchemy and SQLite locally. Responsive layouts support desktops, tablets and phones, with touch controls and mobile bottom navigation. I'll now show the product.

LIVE DEMO CUES

About 3:40

1. Overview

20 sec

Open a fresh sample demo. Show the monthly budget, spending and remaining balance.

2. Add an expense

60 sec

Trigger one validation message. Then enter 3,500 KZT, choose Food, add a note and save.

3. Immediate feedback

20 sec

Show the confirmation and updated totals: 81,150 KZT spent and 38,850 KZT remaining with fresh sample data.

4. Transaction history

40 sec

Find the new purchase. Demonstrate a filter and open the edit form.

5. Budgets, insights and mobile

80 sec

Show category limits and spending charts. Switch to a phone-sized view and point out the bottom navigation and touch controls.
